

v2, building now. v3, scoped and waiting.

For **Jade** · October 3, 2026 · Site: mhainternshipwebsite.vercel.app

You asked for everything in writing before you sleep. Here it is: the user story, the tier system, the search methodology, the add-a-listing flow in **v2** and **v3**, the ship gates, and the actual v2 build prompt. v3 ideas live inside blue-bordered blocks so you can see what's deferred without hunting.

1 User story

Yours, verbatim:

"An MHA student in a program that's new enough that the internship and fellowship landscape is largely uncharted. They don't know what they don't know — and by the time they realize they should be applying, they're probably already behind on deadlines."

The site's single job is to catch that student *before* they realize they're late. If the first scroll doesn't do that, nothing else matters.

2 The tier system — plain language

What a tier is. A confidence label on each listing. It tells us how sure we are this is a real opportunity an MHA grad can realistically land, versus a role we think *might* be one.

What it does. Two things at once:

- A **label** on each listing — internal only, never shown to the user.
- A **gate** on the search output: anything softer than tier 2 doesn't make it into `listings.json`.

How it links to search. The search methodology produces a candidate pile (maybe 150–200 possibles). The tier filter cuts anything that can't be verified. It's the quality floor that lets me ship a long list without stuffing it with maybes.

Search sources → Candidate pile → Tier filter → listings.json → Site

Tier definitions (operational, not aspirational)

TIER	WHAT QUALIFIES	CONFIDENCE
Tier 1	Employer and role named in a California MHA program's outcomes report (last 3 years), or explicitly named on the employer's own advanced-degree / MBA / MHA recruiting page.	High
Tier 2	Employer has a documented advanced-degree pathway AND the role is in a healthcare-adjacent practice/division AND that practice has publicly hired graduate-degree holders in the last 2 cycles.	Medium
Tier 3	<i>Cut. Anything softer than tier 2 is not listed.</i>	

Every tier-1 and tier-2 condition is pointable: a specific URL, a specific PDF, a named role on a page. Nothing is "likely" or "probably." That's the discipline.

LinkedIn is explicitly not a verification source. Alumni on LinkedIn tell you where someone's degree once helped them get hired — not whether the firm is still recruiting from that program this cycle. We removed it per your call.

3 How search is done — the methodology

Sources, in strict priority order. Higher-tier sources get checked first; lower-tier sources only fill gaps.

1. **California MHA program outcomes reports.** Every accredited MHA program publishes an annual "where did graduates land" report — employer, role, location. Ground truth. Harvested where public.
2. **ACHE Administrative Fellowship Directory.** ~100 post-graduate fellowships, filterable by state. All CA entries plus remote-friendly / nationally-recruiting entries.

3. **Employer career pages directly.** Grad / advanced-degree sections of each firm's own site. The authoritative source for currently-open roles.
4. **NAHSE, NALHE, NCHL, Institute for Diversity in Health Management.** Fellowship aggregators that cover programs ACHE often misses, especially diversity-focused tracks.
5. **BioSpace, HIMSS internship postings.** Industry-specific aggregators for pharma/biotech and health IT.

Bucket minimums for v2

So the list doesn't lean on one industry:

- ≥ 7 CA health system fellowships / internships
- ≥ 5 CA payer / health plan internships
- ≥ 7 consulting (MBB + Big 4 + healthcare boutiques)
- ≥ 5 pharma / biotech
- ≥ 5 digital health / health tech (non-engineering only)
- ≥ 3 government / public sector
- ≥ 3 non-profit / foundation
- ≥ 3 post-grad administrative fellowships at non-CA-health-system orgs (VA, academic medical centers, national systems)

Total floor: **≥ 50 listings**, all tier-1 or tier-2.

4 v2 build — what ships now

Code and copy changes

AREA	CHANGE
Header	Remove UCLA tag chip entirely
Accent color	UCLA Blue (#2774ae) → warm umber (#9a5a2d). Single-accent discipline keeps.
Share card (og.svg)	New copy: <i>"The list of fellowships and internships, by deadline. For California MHA students."</i> No UCLA callout.
Favicon	Same stroke, updated to new accent color
Button label	"Open source ↗" → "Official posting ↗"
Filter label	"Work mode" → "Format"
Status flow	Untracked / Considering / Application in progress / Applied / Interviewing / Archive
Browse filters	Three only at top: Category / Deadline / Format. City + Pay in "More filters" drawer. "My status" removed from Browse (dashboard only).
Post-grad	Folded into Category dropdown as its own option; checkbox removed.
MHA year filter	Removed. Timing guidance goes inline on each listing.
Deadline options	All / Open / Rolling / Next 30 days / Next 60 days / Next 90 days / Closed this cycle
Deadline logic	Open = any currently accepting (undated / rolling / any future deadline). 30/60/90 are narrower slices.
Partnership chip	Two options only: PARTNERSHIP SPECIFIC or PARTNERSHIP UNKNOWN . Non-partnership listings show no chip.
Partnership nudge	Under the chip row on PARTNERSHIP SPECIFIC listings: <i>"Verify your school is on their recruiting list — contact your MHA program's career center."</i>
Closed listings	Stay visible with <i>"Application window closed · next projected [month, year]"</i>

Categories, cities Options generated from the actual listings data. No predetermined lists.

About page updates

- Opening sentence rewritten for all CA MHA students — UCLA references removed.
- **"What I wish I'd known"** section with the four approved tips:
 - Attend in-person consulting fairs at your campus; build relationships with recruiters and current consultants who are alumni of your program. Go to their case-study events.
 - At MBB and Big 4, MHA grads typically enter at the Associate / Senior Consultant level — not the undergrad Analyst track. See the entry-role table below.
 - Post-grad administrative fellowships at health systems are 12–24 month paid programs that start July after graduation. Deadlines land in fall of your final year.
 - If a program isn't posted for this cycle yet, note last year's deadline as a starting reference.
- **Consulting MHA entry-role reference table** (McKinsey, BCG, Bain, Big 4, boutiques) with the "pre-grad role you shouldn't apply to" column.
- "Add a listing" button at the bottom of the home page and at the bottom of About.

5 Add-a-listing flow

v2 Human review via GitHub Issue

Shipping tonight. No new infrastructure. Uses what we already have.

1. Student clicks "Add a listing" at the bottom of the home page.
2. Button opens a **pre-filled GitHub Issue** on the **MHAinternshipwebsite** repo, using an issue template with three fields: Role title, Employer, Source URL (optional: brief note).
3. Student submits the issue. GitHub automatically emails you a notification via your account settings.
4. You open the issue in GitHub, decide:

- **Approve:** add the listing to `listings.json` via the GitHub web UI (one commit, 60 seconds).
- **Decline:** close the issue with a short comment.

5. On approve → Vercel auto-deploys, listing is live.

You're always in the loop. Nothing goes live without your tap.

V3 Claude-powered automatic extraction, you still approve

Deferred. Needs two new environment variables (ANTHROPIC_API_KEY, GITHUB_TOKEN) and one Vercel serverless function. Build it when you want the submission form to feel instant.

THE FLOW

1. Student clicks "Add a listing" → three-field modal (Title, Employer, Source URL).
2. POST to `/api/submit` (Vercel serverless function).
3. Function fetches the URL, confirms HTTP 200 and that the employer name appears in the page content.
4. Function calls Claude once: *"Does this URL describe an internship or fellowship an MHA grad could realistically apply to? Return yes/no + 1-sentence reason + extracted fields (location, deadline, format, category)."*
5. If YES → function uses the GitHub API to open a **pull request** on `listings.json` with the extracted listing on a branch called `submission/[hash]`. PR body contains the student's note + Claude's reasoning.
6. You get a GitHub notification. Review the PR. Click Merge (or Close) in the web UI.
7. On merge → Vercel auto-deploys.

DIFFERENCE FROM V2

- Student sees "Added to the review queue — Jade will get to it soon" instead of being redirected to GitHub.
- The listing is pre-structured by Claude, so your review is a one-click Merge for most of them.
- Rate limit: one submission per IP per hour via Vercel KV.

COSTS

- Vercel serverless: free tier handles thousands of invocations.
- Claude API: ~\$0.003 per submission (one short call).
- Vercel KV: free tier is sufficient.
- **Realistic monthly cost: under \$1** unless the site goes viral.

V3+ Fully automatic (opt-in later)

Only consider this if submission volume ever gets large enough that queue review becomes a chore.

- Claude extracts + validates + commits directly to `main` (no PR). You get a weekly digest email of what was auto-added, and you can revert any entry with one click.
- Added only when there's clear demand. For now, you stay in the loop.

6 Ship gate — what has to pass before merge

V2 You review the preview URL, then merge

Same gate as v1. When I open the v2 PR, Vercel builds a preview URL automatically. You open it, scroll, decide if it reads right. If yes, you click Merge in the PR. Production deploys from `main`.

No external reviewer. You're the gate.

V3 Automated gate — merge without you

When you want to stop clicking Merge every iteration, enable GitHub Actions on the repo. The actions run on every PR:

1. **Link check:** every `source_url` in `listings.json` returns HTTP 200.
2. **JSON schema validation:** `listings.json` parses and every entry has required fields.
3. **Build success:** Vercel preview deploys without a console error on the home page.
4. **No HTML/CSS parse regressions.**

If all four pass → auto-merge → production deploys. If any fail → PR stays open with a labeled error.

Enables you to go to sleep and wake up to new listings.

7 The v2 build prompt — what I'm executing now

Build v2 of MHAinternshipwebsite.

Context. v1 is live at mhainternshipwebsite.vercel.app, PR #1 merged into main.

Static HTML/CSS/JS. Vercel wired to the repo and auto-deploys on push to main.

User story (ship/no-ship test):

"An MHA student in a program that's new enough that the internship and fellowship landscape is largely uncharted. They don't know what they don't

know – and by the time they realize they should be applying, they're probably already behind on deadlines."

Non-goals.

- No auth, no backend, no serverless function in v2.
- No per-listing MHA-entry-role field.
- No LinkedIn-alumni verification language anywhere.
- No per-chip school list.

Code changes (exhaustive).

1. Remove the UCLA tag chip from the header.
2. Replace accent #2774ae with #9a5a2d (warm umber) in CSS, favicon, OG card.
3. Rename "Work mode" → "Format".
4. Rename posting button → "Official posting ↗".
5. Rename statuses: Untracked / Considering / Application in progress / Applied / Interviewing / Archive.
6. Move "My status" filter: Dashboard only, remove from Browse.
7. Fold "Show post-grad fellowships" into Category dropdown as its own option.
8. Remove MHA year filter.
9. Deadline options (no parentheses in UI): All / Open / Rolling / Next 30 days / Next 60 days / Next 90 days / Closed this cycle.
Open = any currently accepting applications (undated, rolling, or any future deadline). 30/60/90 narrow Open to upcoming deadlines.
10. Partnership chip: two options only – PARTNERSHIP SPECIFIC or PARTNERSHIP UNKNOWN. Non-partnership listings show no chip. Below the chip row on PARTNERSHIP SPECIFIC: "Verify your school is on their recruiting list – contact your MHA program's career center."
11. City options are generated from actual locations in listings. No

- predetermined option list. Same rule for Category.
12. Closed listings stay visible with "Application window closed · next projected [month, year]".
 13. About page:
 - Opening rewritten for all CA MHA students; UCLA removed.
 - "What I wish I'd known" with the four tips confirmed.
 - Consulting MHA entry-role reference table.
 - "Add a listing" button at the bottom of home page and About.
 14. Regenerate og.svg with new copy.

Data sweep (bucket minimums):

- ≥7 CA health system fellowships / internships
- ≥5 CA payer / health plan internships
- ≥7 consulting (MBB + Big 4 + healthcare boutiques)
- ≥5 pharma / biotech
- ≥5 digital health / health tech (non-engineering only)
- ≥3 government / public sector
- ≥3 non-profit / foundation
- ≥3 post-grad administrative fellowships at non-CA-health-system orgs

Total: ≥50 listings. Every listing tier_1 or tier_2 only. No tier_3.

Each listing must carry: title, employer, source_url (reachable), locations, format, rolling flag, deadline (null if undated), next_projected_month (if closed), partnership (specific / unknown / none), tier (1 or 2), last_verified (today).

Ship gate: open PR to main. Jade reviews the preview URL, clicks Merge. No self-merge.

8 What's deferred — the v3 shopping list

- **Claude-powered add-a-listing endpoint** (see section 5) — needs ANTHROPIC_API_KEY + GITHUB_TOKEN as Vercel env vars.
- **Automated ship gate** (see section 6) — GitHub Actions for link check + schema validation + build check.
- **Fully-automatic add-a-listing** with weekly digest — only when submission volume justifies it.
- **Résumé-match client-side** — paste a résumé, site ranks listings by fit. Runs in the browser, never leaves the device.
- **Anonymous flywheel** — "N classmates applied here" counts, requires light auth.
- **Scheduled re-sweep** — a bot that re-runs the search methodology quarterly and opens a PR with net changes.
- **Internal tier label visible on listings** if a user requests it (power-user filter).

9 Tomorrow — things we haven't decided

- Which four insider tips go on the About page in their final form (you confirmed the themes; exact wording still open).
- Whether the "Add a listing" button text should be something softer — "*Suggest a listing*", "*Found one? Add it*", or similar.
- Whether the partnership nudge sentence belongs under the chip row or as a tooltip on the chip itself.
- Any employers specifically called out at the UCLA consulting fair last week that you want added by name.
